

# Green Energy's Direct PPA Program

In recent times, utilities have been publishing increased energy rates unpredictably, making it difficult for businesses to budget energy costs. In addition, rising infrastructure costs promise to accelerate these increases at an alarming rate.

As of December 2024, the average residential electricity rate in the United States is approximately 16.54 cents per kilowatt-hour (kWh).

Businesses continue to be surprised with 10+% increases on an annual basis.

Green Energy has developed direct relationships with solar investors to create a direct-sourced Power Purchase Agreement (PPA) program for our customers, responding to a growing customer need.

## **Program Highlights**

- No Capital Outlay
- No Maintenance Responsibilities
- Performance Guarantees
- Easy to manage "per kWh" pricing
- Terms of 15-30 years
- The program eliminates the costs of financial middlemen with similar programs
- Potential to include EV Chargers, roofing improvements, etc.

The Green Energy Power Purchase Program can often offset the electric bill with 10-20% savings. These rates are locked in for the term of the agreement, allowing the customer to avoid anticipated utility rate increases for the term of the agreement.
