

Green Energy Project Management

Green Energy Construction & Consulting has installed over 100MW of solar projects during 15+ years' worth of experience. This experience shines through in a comprehensive project management approach.

1. Comprehensive Project Planning

- Conduct site assessments and feasibility studies.
- Develop customized solar solutions tailored to client needs.

2. Permitting and Compliance

- Handle all necessary permitting processes with local and state authorities.
- Ensure compliance with zoning, environmental, and construction regulations.

3. Utility Interconnection Coordination

- Liaise with utility companies to facilitate interconnection approvals.
- Prepare and submit interconnection applications, ensuring grid compatibility.

4. Construction Management

- Oversee all aspects of construction, including material procurement and contractor coordination.
- Implement quality assurance protocols to ensure efficient, on-time project delivery.

5. Inspection and Commissioning

- Coordinate and pass required inspections from local jurisdictions and utility companies.
- Conduct thorough system testing to ensure safety, reliability, and performance before activation.

6. Ongoing Support

- Provide detailed training and handover materials to the client.
- Offer long-term maintenance and monitoring services to optimize system performance.
